Clean-tech

Gornitzky & Co. is committed to helping clients navigate the rapidly changing landscape of the clean-tech and renewable energy industries.

Our Clean-Tech team advises clients on a variety of legal matters involving clean-tech ventures, such as electric vehicles, bio-fuels, water projects, wind farms, solar energy systems and farms, and other renewable energy sources. We provide related legal services, which pertain to project finance, power purchase agreements, regulatory matters, leases and real estate agreements, construction plans and agreements, securitization of intellectual property rights, applications for renewable energy grant programs and others.

Our attorneys have comprehensive proficiency of the clean-tech industry and experience in working with clean-tech and renewable energy companies both in Israel and around the world. We act for concessionaires, investors and financial institutions, as well as developers, financiers, manufacturers and entrepreneurs, in connection with clean and renewable energy projects. Gornitzky's Clean-Tech team assists funds and principals in investment transactions relating to the clean-tech industry, and represent investors in the establishment of clean-tech funds. We also represent Israeli and foreign clients in dealing with the regulatory authorities in Israel.

With a Clean-Tech team that is fully integrated with other practice areas, such as our Energy & Natural Resources and Hi-tech & Biotech teams, our clients receive an all-encompassing service on any issues related to the clean-tech sector.
